

# Using Accountability to Grow Software\*

## Banquet Address

*Jason Beutler*  
*EduSource*

Several years ago, Jason Beutler was teaching a computer engineering class as an adjunct when he realized that his students were writing better code than an outsourced team he was supervising at the same time. And that's how EduSource was born. Rather than outsourcing custom software creation overseas, EduSource edu-sources software to the local education community. Student apprentices work for EduSource for up to two years while in school, gaining true professional experience, while earning money for college. Today, EduSource has grown into a 30-employee that is a major player in the Indianapolis custom software market.

With almost 20 years of professional programming experience, you might expect Jason to spend his free time reading fantasy fiction, playing board games, or drinking Mountain Dew. He does. But he also spends a fair amount of time playing competitive sand volleyball and fanning hard-core at Notre Dame football games. Jason's passion for the University of Notre Dame extended to completing his MBA there in 2009. His undergrad degree was a Bachelor of Science in Computer Science from Taylor University. Jason is passionate about new ideas, teamwork, and gaining efficiency through process.
